Stimulating your imagination

As researchers advance the frontiers of neurology, neurosciences and psychiatry, more and more are using magnetic stimulation as a key tool. The versatility and non-invasiveness of this exciting technique make it suitable for a wide variety of applications – from eliciting motor evoked potentials to advanced brain mapping research techniques.

Magstim, the pioneer and continuing leader in this field, has developed a range of stimulators which are suitable for even the highest-end applications. However, right from the very beginning we have been proud to work with many researchers worldwide to design customised models for new protocols as they emerge.

Now, with the launch of Magstim Innovations, we are making this unique custom design service available to all our customers. Developed to exact research requirements, Magstim can help you push the boundaries of neuromodulation and brain stimulation with systems that meet your specific needs. Inspired by forward thinking researchers, the Magstim Innovations team is bound only by imagination. This brochure introduces our dedicated capability and provides an initial guide to the steps involved in a customised design.

the '7 Step' pathway

Magstim Innovations

We are on your wavelength

The Magstim Innovations team comprises of specialists in all relevant disciplines with long experience of working together. Furthermore they are able to call on the expertise of Dr Reza Jalinous, our Technical Director and one of the inventors of modern magnetic stimulation technology. Such expertise ensures both a creative and practical solution to your particular challenge.

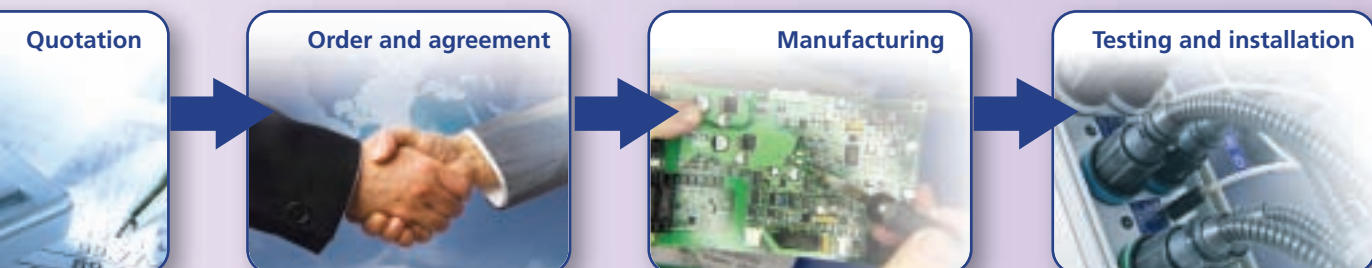

The pathway to success

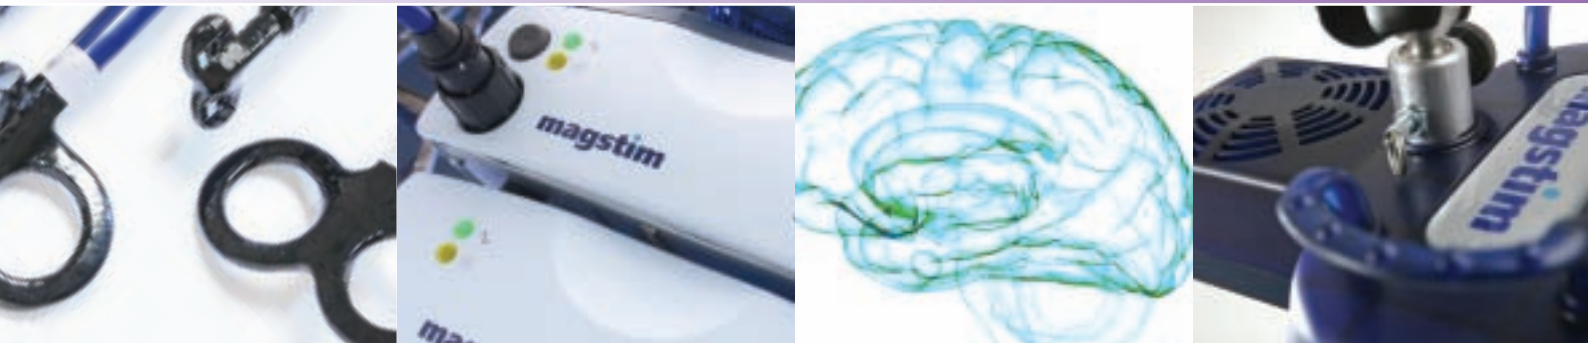

Based on our experience, we have developed a '7 Step' pathway to successful customised product production. This process will ensure that we work closely with you to identify your exact requirements in order to deliver the product that you need, when it is needed.

Your next step

Inspired? Then your next step is to get in contact with our team to set up a discussion and evaluation.
